Trail Emergency System:

To improve trail safety, the City of Dallas is implementing a trail marker system that will aid first responders in the event of an emergency.

Sign posts, with a unique location identifier, will be placed approximately every 1/8 mile to ensure trail users are never far from an emergency marker. Emergency response teams will now know exactly where on the trail they need to respond and how to best access that locations.

If you should need assistance while using a trail, find the nearest marker, dial 911, and tell the operator the locator number listed on the sign.

A pilot program to test the system’s effectiveness is being implemented on the Katy Trail.

After successful completion of the pilot program they system will be expanded to include other City trails.
